Global Feed premix market is valued approximately USD 20.40 billion in 2018 and is anticipated to grow with a growth rate of more than 5.9% over the forecast period 2019-2026. Feed premix are said as refined mixture of biologically active substance that is blended chemically or microbiologically in an intention to enhance the nutritional value of the feed. Feed premix helps in improving immunity level of livestock and animal health, along with this it is beneficial in improvement of good appetite, digestion and increasing antibiotic growth in the animal body. The rise in demand and consumption of livestock-based products, growth in feed production and rise in compound feed consumption are the factors driving the growth of market over the forecast years. Whereas, rise in cost of feed ingredients, stringent regulatory framework and ban on antibiotics in different countries are the factors hampering the growth of market over the forecast years. However, rise in consumption of feed premix in developing regions is a lucrative opportunity for the growth of market.
