Abstracts

Global Femur shaft fracture Market is valued approximately USD XXX million in 2019 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2020-2027. Femur shaft fracture is a break along the length of the leg bone. Typically, a fracturing of the femoral shaft typically produces acute, intense pain. The wounded leg would not be able to place weight on it, and it will appear deformed, thinner and no longer straight than the other leg. The increasing occurrences of high-energy crashes, primarily traffic injuries, drops from high altitudes, gun shots and more, are the key factors driving the development of the Femur shaft fracture industry. As per Association for Safe International Road Travel, 1.35 million people die in road crashes per year while an additional 20-5- million people suffer non-fatal injuries which often result in long-term disabilities. The growing occurrence of these events allows the development of the industry to be driven by femur shaft fractures. Increased research activities along with the evolution of the use of intramedullary nails for the treatment of the femur shaft market are also accelerating the development of the market over the projected period. Moreover, as the older population experience deficiency of bones that can easily be broken, the growing geriatric prominence can lead to increasing cases of Femur Shaft Fracture. However, High Cost of treatment impedes the growth of the market over the forecast period of 2020-2027.

The regional analysis of global Femur shaft fracture market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world in terms of market share

owing to the early adoption of technology and well-established infrastructure. Whereas, over the projected period 2020-2027, Asia-Pacific is expected to have the highest growth rate / CAGR due to factors such as rapidly growing population, which will generate lucrative growth opportunities for the Femur shaft fracture market in the Asia-Pacific region.
