Abstracts

Global Fiber to the Home market is valued approximately at USD 10.4 Billion in 2018 and is anticipated to grow with a growth rate of more than 15.10% over the forecast period 2019-2026. Fibre to the Home (FTTH), also known as 'Fibre to the Home' (FTH), is the construction and use of optical fiber from the central point directly to individual premises, such as homes, apartment complexes and enterprises, and provides unlimited high-speed Internet connectivity. In FTTH networks, fiber is directly connected to individual homes or multi-story buildings. Fiber to the Home (FTTH) is an advanced networking system that operates on fiber optic networks to allow quicker, more secure communication and high-speed Internet connectivity. Growing urbanization, combined with rising government support for the implementation of smart city programs followed by rising internet penetration, are some of the main factors projected to fuel the target demand growth over the forecast period. Therefore, in a smart city, homes need to be linked to the internet-possibly through the FTTH network-thus the use of FTTH in smart city is projected to fuel the development of the target market in the near future. For instance, as per government source, there are 1,000 smart city pilot projects around the world and China is home to 500 smart city pilot projects, both big and small. The country also spent USD 46.52 billion in the production of pilot projects in 2017. Moreover, high costs for the installation of FTTH networks and the relatively higher costs for the average household, in developing countries, are among some of the major factors expected to hinder the growth of the global market over the forecast period.

The regional analysis of global Fiber to the Home market is considered for the key

regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. Similarly, Asia Pacific is the fastest growing region in the global Fiber to the Home due to the rising construction industry in the region.
