Global Filter Bag Market is valued at approximately USD 2.5 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 4.9 % over the forecast period 2022-2028. Filter bags are one of the most regularly utilized and cost-effective liquid or gaseous filtration elements. Bag filters are used for batch filtration as well as high-flow filtration. They are also used to filter solid particles in a dust-containing gas. Rising government initiatives to reduce air pollution, expanding cement and mining industry, and imposition of strict rules & regulations across the Globe have driven the adoption of Filter Bags across the projected period. For Instance: The Indian government and IIT Kanpur collaborated to establish the National Air Quality Index. The National Clean Air Program was begun in India in 2019. By 2024, the program aims to reduce PM2.5 and PM10 levels by 20-30%. The country's industries are obligated to follow the guidelines as a result of the enforcement of such strict standards. Also, rise in demand from Coal-fired Power Plants and expanding manufacturing facilities are most

likely to boost the overall growth of the Filter Bag market. However, fluctuating raw materials prices and increased product prices can obstruct the market's expansion over the projection period of 2021-2027.

The key regions considered for the global Filter Bag market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. US is the leading region across the world. Rising implementation of regulations is driving the market growth in the US. Whereas, Asia Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027. The market is expected to grow during the projected period, due to rapid economic growth and rising environmental restrictions.
