Global Filtration and Separation Market is valued at approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2028. Filtration & separation is a system that is used for the removal of airborne and waterborne pollutants. This system is gaining huge traction in order to filter out the inessential effluents through the usage of filter media. The growing awareness of curbing water and air pollution, imposition of various stringent government regulations, coupled with increasing R&D investments are some prominent factors surging the filtration & separation demand in the global market. According to the Our World in Data report 2021, air pollution is recorded as one of the leading causes of death which accounted for 6.67 million deaths in 2019, which is evaluated as 11.65% of deaths globally. Accordingly, the rising incidences of deaths because of air pollution is creating a lucrative demand for filtration & separation, which, in turn, augments the market growth across the globe. However, higher initial and operating cost is impeding the growth of the market over the forecast period of 2022-2028. Also, the rising introduction of innovative products and growing adoption of nanotechnology for air and water filtration applications in different industries are anticipated to act as catalyzing factors for the market demand during the forecast period.

The key regions considered for the global Filtration and Separation Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share due to the increasing spendings on technological developments and presence of the well-

established market players. Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as the increasing number of regulatory policies, as well as growth of the countries like South Korea, India, Japan, and China would create lucrative growth prospects for the Filtration and Separation Market across the Asia-Pacific region.
