Global Floating Covers Market is valued approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. Floating Covers refers to geomembrane barrier which is designed to float on surface of water. There are two basic types of floating covers Single Geomembrane covers and Modular Covers. Single geomembrane cover can take many different forms dependent on the design objective of the cover and the size and shape of the installation. On the other hand, the modular cover system consists of individual casings, which are tied together to form a complete cover over the liquid. Growing awareness regarding the protection of water bodies and rising Mining and resource processing projects are key drivers for the growth of Floating Covers market. For instance, In August 2021 Layfield USA Corporation is awarded contract for the supply and installation of a new CSPE liner and floating cover system for the Seattle Public Utilities Lake Forest Park Reservoir project in Washington State. Also in November 2021, The Pittsburgh Water & Sewer Authority (PWSA) has partnered with Layfield Geosynthetics (USA) for installation of a chlorosulfonated polyethylene (CSPE) liner and floating cover system for the Highland 2 Reservoir. In addition, with the increasing demand from end use verticals, the adoption & demand for Floating Covers is likely to

increase the market growth during the forecast period. However, shifting trend towards use of biodegradable plastic and stringent government regulations over plastic use impede the growth of the market over the forecast period of 2022-2028.

The key regions considered for the Global Floating Covers Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America is the leading region across the world in terms of market share owing to presence of leading market players and rising demand due to rising demand for the product in the region. Whereas, Asia-Pacific is anticipated to exhibit highest growth rate over the forecast period 2022-2028. Factors such as growing application of floating covers in farm activities, waste water treating units, water storing plants and others in the region would create lucrative growth prospects for the Floating Covers market across Asia-Pacific region.
