Global Floor Grinding Machines Market is valued approximately USD 293.3 million in 2021 and is anticipated to grow with a healthy growth rate of more than 3.3% over the forecast period 2022-2028. In the construction business, floor grinding machines are used to polish and grind granite, concrete, and marble. This equipment can also be used to restore damaged surfaces and level uneven joints. Floor grinders improve the floor's durability and aesthetic appeal. In floor grinders, different types of revolving discs are used to level, smooth, and clean the floor surface. Single discs, multiple discs, and quadrupole discs are all options for floor grinders. Floor grinding machines' coarse discs typically remove less than 1/16 inch of the floor. Because of the thriving construction industry, significant development in the retail, commercial, and hospitality segments, technological advancements and innovations in the flooring industry, and shifting demand toward modern and fast construction techniques, the Floor Grinding Machine Market is expected to grow significantly in the future. Key players operating in the market are taking strategic moves in the market. For instance, Blastrac N.A., one of the major producer of surface preparation solutions for the global construction and remediation industries, was bought by The Husqvarna Group's Construction Division in December 2020. The acquired product line expands Husqvarna Construction Division's

concrete surface and floor portfolio. Similarly, the Sase firm opened a service and distribution centre in Orange, California in August 2020. A showroom and fully stocked warehouse, repair and rental department, will-call and next-day shipment, onsite demos, and financing services are all available at the new location. However, rising costs and unexpected price fluctuations in raw materials destabilise supply chains, making it difficult for manufacturers to compete in the competitive floor grinding machines market. Whereas, rise in demand for remote-controlled floor grinding machines is expected to be an opportunity for the market.

The key regions considered for the global Floor Grinding Machines Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. The APAC region held the greatest market share. China, India, and Japan are the key drivers of floor grinding machine demand in APAC. During the forecast period, China is expected to be the world's fastest-growing market. These countries' expanding populations provide a large customer base. Increased public and private sector investments, rising population, an expanding economy, and high disposable income all contribute to the construction industry's expansion. North America is another important area in the global floor grinding machines market. The worldwide floor grinding machines market in the region is growing as technology advancements and residential development activities increase. .
