## **Abstracts**

Global Flue Gas Desulfurization Systems Market is valued approximately USD 16.7 billion in 2018 and is anticipated to grow with a healthy growth rate of more than 5.30 % over the forecast period 2019-2026. Flue-gas desulfurization (FGD) is a set of technologies that is utilized to eliminate sulfur dioxide (SO<sub>2</sub>) caused by coal combustion of boilers or from fossil-fuel power plants. This flue gas desulfurization consists of removing SO<sub>2</sub> from the Flue gas before it is emitted. Rise in Environmental Awareness and Stringent Regulations related with emissions of harmful gases emitted by various industrial processes in the environment are key driving forces of the market growth. For instance, according to the Canadian Council of Ministers of the Environment, CCME introduced Canadian Ambient Air quality Standards (CAAQS) that plays a significant role for air quality management in Canada. These standards have also been developed for ozone, nitrogen, fine particulate matter and Sulphur dioxide. Also, CAAQS are revised in every five years to ensure they are strict enough to protect human health and environment. Similarly, the 2018, European Environment Agency, are planning to implement stringent emission limits to cut emission of Sulphur dioxide 66% by 2030 as compared to 2016. Apart from this, rising number of coal fired plants in India and China is expected to create significant growth opportunity in the market over the forecast period. As per Federal power ministry of India, India's coal-fired power generation capacity is rise 22.4% by 2022. However, emergence of alternative and renewable sources of energy impedes the growth of the market over the forecast period of

2019-2026.

The regional analysis of global Flue Gas Desulfurization Systems market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is expected to register steady growth across the world in terms of market share owing to the ongoing industrialization coupled with rising usage of cement and other materials. Whereas, Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2019-2026. Factors such as rising manufacturing industries coupled with growing presence of coal fired power plants would create lucrative growth prospects for the Flue Gas Desulfurization Systems market across Asia-Pacific region.
