Abstracts

Global Foliar Fertilizer Market is valued at approximately USD XXX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XXX% over the forecast period 2022-2028. Foliar Fertilizer is a fertilizer product type, which is designed for applying the fertilizer directly onto the leaves of a plant. The main reason for applying the same onto the plants is to protect the flora from foreign particles, germs, and other outside environmental conditions. Thus, increasing demand for indoor farms and increasing demand for the crop yield are factors contributing to the market growth. For instance: according to Statista, the global market for indoor farming is expected to go to USD 25 billion, by the year end 2027 from USD 14.3 billion, in the year 2020. However, Lack of awareness among the farmers and variations in the prices of the foliar fertilizers impedes the growth of the market over the forecast period of 2022-2028. Also, Active participation of the private players in the market and rising investments in Research & Development activities is likely to fuel the market growth during forecast period.

The regional analysis of global Foliar Fertilizer market includes Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia Pacific is the leading region across the world with largest market share owing to growing demand to treat deficiency in arable land. Whereas North America is also anticipated to exhibit the highest growth rate over the forecast period 2022-2028. Constantly increasing agricultural sector would create lucrative growth prospects for the Foliar Fertilizer market across North America region.
