## **Abstracts**

Global Food Industry Vacuum Cooling Equipment Market to reach USD XXX billion by 2025.

Global Food Industry Vacuum Cooling Equipment Market valued approximately USD XXX billion in 2017 is anticipated to grow with a healthy growth rate of more than 6.7 % over the forecast period 2018-2025 Vacuum cooling emerged as a significant evaporative cooling technique which is used to meet the special cooling requirement of moisture and porous foods. Today, vacuum cooling equipment is the most indispensable resource, especially in a quality intensive environment like the food and beverages industry. Also Increasing emphasis on maintaining the quality of food is one of the key driving forces helped in increasing the demand of vacuum cooling machine, thus encouraging the growth of the market. vacuum cooling is used for cooling various food products such as meat products, F&V, baked products, and readymade food. Vacuum cooling equipment achieves rapid evaporative cooling by significantly evaporating a part of the water from the food products. Earlier, vacuum cooling was available only with oil-lubricated rotary vane vacuum pumps. Nevertheless, the technology is now replaced by screw vacuum pumps which can be operated without oil or any other operating fluids. These pumps provide high pumping speed at low operating pressures and require less maintenance. This type of cooling is conducted in controlled conditions, which helps in reducing the impact of microorganisms on food products.
