## **Abstracts**

Global Food Preservatives Market is valued approximately at USD 2.6 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 4.1% over the forecast period 2021-2027. Food preservatives are used to prevent the growth of microorganisms and inhibit or delay food spoilage. These preservatives are used to preserve food products such as snacks, bakery products, confectionery and others. Rising trend of consuming ready-to-eat food products around the world is increasing the application of food preservatives. Growing demand for processed food, rising consumption of perishable food products such as meat, poultry and seafood and increased penetration of organized retail sector are the factors fueling demand for food preservatives market. For instance, according to Statista, in Latin America, the market value of processed food and beverages preservatives was USD 270 million, which is expected to reach USD 300 million by 2021. Also, the global seafood market value was USD 159.31 billion in 2019 which is expected to increase to USD 194 billion by 2027. Furthermore, higher cost of natural preservatives and rising consumer awareness for side effects of synthetic preservatives may hamper the growth during forecast period. However, growing preference for fresh food and rising willingness to pay premium prices are expected to fuel the demand for food preservatives in the coming years.

North America is leading the world market among Asia Pacific, North America, Europe, Latin America, and Rest of the World, due to increased consumption of processed meat

and well-established bakery stores. Whereas, Asia Pacific is expected to grow at the fastest pace during forecast years, owing to rising population and growing preference for ready-to-eat food products in the region.
