Abstracts

Global Forage Seed Market is valued at approximately USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than 7.5% over the forecast period 2021-2027. Forage is a plant material that is primarily made up of plant leaves and stems and is used to feed livestock. Plants or plant parts used to feed poultry, livestock cattle, swine, and other animals are known as forage seeds. Increased production in subsequent crops, interior drainage is improved, and other benefits of forage seeds are helping the market to grow. Furthermore, because forage seeds do not require synthetic fertilizers or pesticides, they contribute to the improvement of soil quality. Alfalfa, maize, oats, clover, pearl millet, grasses, and other feed seeds are commonly available on the market. Growing demand for meat and meat products is fueling the market growth over the forecast period. Livestock is one of the world's most resource-intensive industries, with grazing pasture and cropland dedicated to feed production accounting for roughly 80% of all agricultural land. According to the FAO, feed crops are farmed on 1/3 of all farmland, while pasture covers 26% of the ice-free terrestrial surface. Around 80% of the world's grazing areas are open lands, which are meadows without trees or dense human settlements. For dairy cattle, including heifers, dry cows, and the milking herd, pastures have always provided forages and nutrients and will continue to do so in the future. Livestock is a primary driver of worldwide agricultural expansion. The change in diet and food consumption patterns toward livestock products is increasingly driving the global food industry. Livestock animals have become increasingly reliant on feed and forage resources. Changes in the production and quality of feed crops and forages may also have an impact on cattle. People are very sensitive about the quality of meat they eat; therefore, increased animal

output is likely to create a need for better forage crops. Better grade forage seeds are the only way to keep up with the growing demand for forage crops. However, reduction in seed yields due to excess soil water, drought and weeds may impede the market growth over the forecast years.

The regional analysis of the Global Forage Seed Market is segmented for the key regions such as North America, Europe, Asia Pacific, Latin America, and Rest of the World (ROW). Europe is the dominating region across the world in terms of market share due to availability of large grazing land for animals and cultivating land in the region. Whereas Asia Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027, due increasing demand for organic food, dairy, and poultry products across APAC.
