Abstracts

Global Freight Transport Market is valued approximately USD 28.66 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 11.5% over the forecast period 2022-2029. The market's expansion is linked to the affordable shipping costs set by suppliers of freight transport services and the many free trade agreements between nations. For instance, Canada and the European Union agreed to a thorough economic trade pact. 98% of the tariffs on European goods traded between Europe and Canada are being eliminated by the Canadian government as a result of this agreement. By lowering commodity prices, which naturally boosts demand for freight transportation, such agreements help the freight transport market expand. Demand for specialized freight transport and supply chain execution capabilities has increased as a result of the expansion of e-commerce and entrepreneurial endeavours. As logistics, inventory, and fixed expenses are reduced when shippers hire freight transportation services, they benefit.

Due to the lesser capital investment required compared to other forms of transportation, it also guarantees cost effectiveness. This form of transportation also has a huge carrying capacity, which makes it a popular option for moving freight. The expansion of this market segment is also being aided by the rising efforts made by governments around the world to promote road travel. For instance, the Indian government has implemented a national logistics program to streamline corporate operations and

lower transportation costs. As part of this programmed, the government is building a highway network from the port region to the country's outlying regions in order to cut fuel usage, which is seen to be the factor that has the greatest impact on freight transport costs. Along with this, The Blockchain in Transport Alliance (BITA), a platform for the freight industry's standards and education on blockchain technology, recently welcomed United Parcel Service of America, Inc. This aided the business in developing its sophisticated logistics network. Due to the widespread use of freight transport services in manufacturing, retail, and e-commerce, the U.S. is anticipated to maintain its leadership during the projected period. However, the high cost of Freight Transport stifles market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Freight Transport Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. Due to the presence of numerous significant logistics businesses, e-commerce behemoths, and suppliers of freight solutions in the United States and Canada, North America dominated the global market in 2021 and is predicted to maintain its dominance during the forecast period. The continuing development and uptake of emerging technologies like artificial intelligence, near-field communication, and machine learning also contribute to the expansion of the market. By the projection time, Asia-Pacific is anticipated to have significantly advanced and to have grown at the greatest CAGR throughout the prediction period. The rich potential in the region's automotive, packaging, pharmaceutical, and other industrial uses might be blamed for the increase. The Asia Pacific freight transport market is also anticipated to expand as a result of increased industrial facilities brought on by a variety of government incentives, inexpensive labor, and simple land availability supported by sizable markets.
