Abstracts

Global Frequency synthesizer Market is valued approximately at USD 1.75 Billion in 2020 and is anticipated to grow with a healthy growth rate of more than 6.56% over the forecast period 2021-2027.

A frequency synthesizer makes use of procedures of frequency multiplication, direct digital synthesis, frequency division, segment-locked loops, and frequency fixing to generate frequencies. Balance and accuracy of frequency depend on the stability and accuracy of the reference frequency. Increased Use of Mobile Phones Across the Globe, rise used in applications of research and measurement, and military and aerospace applications. Also, RF Capable CIS and Chips Help in Widespread Adoption in Telecommunications Sector are the key driving factors of market which is anticipating the growth of market. Also, development in IT and telecom technologies is a factor which will anticipate the growth of market in forecasted period. For instance: increase in spending on technologies in military by governments will impact positively on market. In the US, military and defense spending estimated for 15% of federal spending, which is USD 732 billion in 2019 as compared to 647 USD billion in 2018. However, high-cost of frequency synthesizer which may impede market growth over the forecast period of 2021-2027.
