Abstracts

Global Froth Flotation Equipment Market is valued approximately at USD 264.2 million in 2019 and is anticipated to grow with a compounded annual growth rate of more than 6% over the forecast period 2020-2027. For froth flotation process, synthetic compounds are used to extract minerals by enabling them to append to air bubbles. It isolates minerals from their ores with the help of reagents used on the surface of froth layer. It is used in paper recycling, mineral processing and waste-water treatment industries to improve the recovery of valuable minerals, such as copper- and lead-bearing minerals. The growing investments in mining industry and stringent regulations pertaining to emission and treatment of municipal and industrial waste are the few factors responsible for growth of the market over the forecast period. Further increased demand for better quality treated water, reduction in water wastage, and stringent environmental regulations will drive the market. Moreover, the introduction of products and other strategic alliance by the market players will create a lucrative demand for the market. For instance: In February 2020, Metso Outotec launched Outotec Tankcell S series, flotation equipment designed to enhance grades, throughput and recovery of ores with cost-effective standardized equipment. This product launch will further expand the product portfolio of Froth Flotation equipment of the company. However, the high demand for large size flotation cells is the major factor restraining the growth of global Froth Flotation Equipment market during the forecast period.

The regional analysis of global Froth Flotation Equipment market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the
