Abstracts

Global Functional Dyspepsia Drug Market is valued approximately at USD 10.52 billion in 2023 and is anticipated to grow with a healthy growth rate of more than 4.92% over the forecast period 2024-2032. Functional dyspepsia is a common disorder that affects the stomach and upper digestive tract. It manifests through symptoms such as pain, discomfort, and bloating, and its exact cause is often difficult to determine. These drugs aim to alleviate symptoms such as bloating, early satiety, and discomfort that occur without any identifiable structural or biochemical abnormalities. Treatment options include proton pump inhibitors (PPIs) to reduce stomach acid production, prokinetic agents to enhance stomach emptying, and medications targeting visceral pain and motility. The goal is to improve quality of life by mitigating symptoms and helping patients better tolerate normal food intake without significant discomfort or pain.

The Global Functional Dyspepsia Drug Market is driven by prevalence of functional dyspepsia is attributed to factors such as dietary changes, increased stress levels, and

aging populations and rising healthcare expenditure also plays a crucial role in enhancing access to medical care and pharmacological treatments for functional dyspepsia. Furthermore, the introduction of novel therapies, including prokinetic agents, mucoprotective agents, and neuromodulators, is presenting new opportunities for market growth. However, limited treatment efficacy among patients, and high cost of pharmacological treatments is going to impede the overall demand for the market during the forecast period 2024-2032.

The key regions considered for the Global Functional Dyspepsia Drug Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. In 2023, North America dominated the market share due to the high prevalence of functional dyspepsia and the presence of major pharmaceutical companies investing in research and development. Meanwhile, Asia-Pacific is expected to exhibit the highest growth rate during the forecast period, driven by increasing healthcare expenditure, rising awareness about functional dyspepsia, and the growing availability of advanced treatment options.
