Abstracts

Global Functional Proteins Market is valued at approximately USD 4.86 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 5.6% over the forecast period 2022-2028. Functional proteins are the complex mixture of biologically active proteins that are ingested to increase the body's resistance against invaders, as they have extended nutrition value thus restores the body's immunity. Increase in the number of prevalent cases of chronic diseases, increase in population adapting functional and ready-to-use foods and increase in demand for functional proteins by fitness enthusiasts, has driven the adoption of Functional Proteins across the projected period. For Instance: Arla Food Ingredients, in 2019 introduced a 100% Whey Protein isolate ingredient designed for ready-to-drink protein beverages targeting fitness enthusiasts. Also, emergence of plant-based protein in the market is most likely to boost the overall growth of the Functional Proteins Market. However, high cost of functional food can obstruct the market's expansion over the projection period of 2022-2028.

The key regions considered for the global Functional Proteins Market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world. High prevalence of chronic diseases and lack of

balanced dietary intake are driving the market growth in North America. Whereas, Asia Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2022-2028. The market is expected to grow during the projected period, due to the rise in population adapting Functional Food.
