Abstracts

Global Gamma Knife Market is valued approximately USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2021-2027.

Gamma Knife is a radiation therapy that uses a technology driven planning software which helps the doctors and physicians discover the minute areas in the brain with critical examination.

Increasing adoption of the gamma knife system in hospitals and increase in cases of brain tumors are the factors contributing to the market growth. For instance: according to American Brain Tumor Association (ABTA), there were approximately 700,000 people who suffered from a brain tumor in the U.S in the year 2017, and it is expected that approximately 80,000 new primary brain tumor cases will be diagnosed every year in the near future. However, huge cost involved in the machines and treatment impedes the growth of the market over the forecast period of 2021-2027. Also, technological advancements and an inclination towards Minimally Invasive Surgeries (MIS) is likely to increase the growth of the market in the forecasting period.

The regional analysis of global Gamma Knife market when considering for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World has led to the analysis that Asia Pacific is a significant region across the world in terms of market share owing to increasing cases of brain tumor, rapid growth in the healthcare infrastructure and raising awareness towards the non-invasive treatment alternatives. Whereas, Europe is anticipated to exhibit the highest growth rate over the forecast period 2021-2027. Factors such as increasing adoption towards the gamma

knife system would create lucrative growth prospects for the Gamma Knife market across Asia-Pacific region.
