Abstracts

Global Gas Pipeline Infrastructure Market is valued approximately at USD XX Million in 2020 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2021-2027. Growing inclination towards clean energy source is creating demand in the natural gas pipeline infrastructure market. Rising natural gas demand among key industries such as power generation, manufacturing and chemical and rising government initiative in setting up natural gas pipeline infrastructure in various parts around the world are injecting growth in the market. According to Statista, natural gas consumption worldwide has increased from 3478.2 billion cubic meters in 2015 to 3903.9 billion cubic meters in 2019. Also, on 31st March, 2021, Petroleum and Natural Gas Regulatory Board (PNGRB) (India), authorized approximately 33,764 Km Natural Gas Pipeline Network across the country with the aim to create a national gas grid and increase the availability of natural gas across the country. Furthermore, growing trade movement and rising discoveries of shale gas reserves are expected to create lucrative demand during forecast period. According to government of Canada, it is estimated that by 2035, shale gas and tight gas will together represent 80% of Canada's total natural gas production. However, high project cost and lack of funding in low- income economies may hinder the growth in coming years.

North America is leading the world market in terms of revenue among Asia Pacific, North America, Europe, Latin America, and Rest of the World, owing to presence of highly integrated transmission and distribution infrastructure that can transport natural gas to and from any state across the region. Whereas, Asia Pacific is expected to

register highest growth rate during forecast period, due to growing consumption of natural gas among many industries such as manufacturing, oil and gas, chemical and others.

Major market player included in this report are:
