Abstracts

Global Gastric Cancer Drugs Market is valued approximately USD 3.0 billion in 2019 and is anticipated to grow with a healthy growth rate of more than 15.5% over the forecast period 2020-2026. Gastric cancer, also known as stomach cancer, is characterized by an intensification of cancerous cells within the lining of the stomach. This type of cancer is usually complex to identify because most people normally do not show symptoms at the earlier stages. While gastric cancer is quite rare as compared to other forms of cancer. There are some other factors of gastric cancer that include certain diseases and conditions such as lymphoma, tumors in other parts of the digestive system, stomach polyps and many more. For these reasons, a number of chemo drugs are used to treat gastric cancer, including: 5-FU (fluorouracil), frequently given along with leucovorin (folinic acid), Capecitabine (Xeloda), Carboplatin, and many more. High incidences of gastric cancer among people owing to unhealthy diet, increasing number of obesity cases and growing elderly population are the few factors responsible for high CAGR of the market over the forecast period. For instance, the National Cancer Institute (NCI) estimated that around 28,000 new cases of stomach cancer in 2017. Also, NCI estimates that stomach cancer is about 1.7 percent of new cancer cases in the United States. Similarly, as per the GLOBOCAN 2018, the number of prevalence cases of stomach cancer in Asia was around 769,728 and is projected to grow to almost 947,186 by 2025. Although gastric cancer therapies can increase the chances of survival for patients living with gastric cancer. This, in turn, is expected to

accelerate the demand of Gastric Cancer Drugs around the world. Amidst the COVID-19 outbreak across the world, the pharma industry is more concerned on the development of COVID-19 vaccine, thus, R&D efforts for gastric cancer drugs is substantially decline. Though, the demand for gastric cancer drugs is not affecting, and it is high as much as before the COVID-19 crisis. Therefore, the market will boost at significant rate in the upcoming years. However, high cost of cancer therapy and stringent regulations and policies for approval of the drugs are some other factor limiting the market growth over the forecast period of 2020-2026.

The regional analysis of global Gastric Cancer Drugs market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia-Pacific is the leading/significant region across the world in terms of market share owing to rising number of gastric cancer cases, introduction of novel therapies for metastatic gastric cancer, and the presence of larger consumer base seeking treatment, particularly in China, India and Japan. Whereas, North America is anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2026, due to growing R&D efforts by pharmaceuticals for gastric cancer drugs and supportive government policies in the region.
