## **Abstracts**

Global Geopolymer Market is valued at approximately USD xxx billion in 2022 and is anticipated to grow with a healthy growth rate of more than 38% over the forecast period 2023-2030. The reaction between an alkaline solution and an aluminosilicate source or feedstock produces geopolymers. Geopolymers are two-component inorganic aluminosilicate binders that are activated by an alkaline activator. However, one of the primary factors influencing the market positively is the increasing use of geopolymer for repairing bridges, tunnels, and highways, as well as the rehabilitation of pipes and structures in civil infrastructure throughout the world. Furthermore, increased demand for geopolymers as a result of changing living standards and rising income levels globally is fueling market expansion. Aside from that, the increasing use of geopolymers in the construction industry as a result of the expanding number of building and infrastructure projects around the world is providing a positive market outlook.

Additionally, the market demand is driven by the growing environmental impact of glasshouse gases produced during cement production. According to Our World in Data, collectively around 50 billion tonnes of CO<sub>2</sub>e is emitted each year. This is more than 40% higher than emissions in 1990, which were around 35 billion tonnes. International Energy Agency states that Global energy-related CO<sub>2</sub> emissions grew by 0.9% or 321 Million tonnes in 2022, reaching a new high of over 36.8 Giga tonnes. Hence, geopolymer turned out to be a cost-effective and environmentally benign alternative to

conventional Portland cement. Governing agencies of various countries are encouraging the adoption of geopolymers by reducing carbon footprint and supporting eco-friendly solutions is impelling the growth of the market. Moreover, various technological advances and improvements in the construction industry are helping to drive market expansion. However, the raw materials used to produce geopolymers, such as fly ash and slag, may not always be readily available in sufficient quantities and there are currently no widely accepted standards or regulations for the production and use of geopolymers, which can lead to uncertainty among potential users, this in turn stifles the growth for the geopolymer market.

The key regions considered for the Global Geopolymer Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 as the region boasts a robust construction industry that heavily relies on advanced materials for infrastructure development, providing a solid foundation for the adoption of geopolymers. Moreover, stringent environmental regulations and a growing emphasis on sustainable construction practices have further fueled the demand for geopolymers in the region. The presence of major market players and their continuous efforts in product development and market expansion have contributed to North America's dominant position. Asia Pacific is expected to grow significantly during the forecast period, owing to factors such as an increasing emphasis on governments, particularly in developing economies, as they prioritize and direct their attention towards specific areas or initiatives. an increasing number of collaborations for biosimilar development, and geographic expansion of key players in the region
