## Abstracts

Global Geothermal Heat Pump Market is valued approximately at USD XX billion in 2022 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2023-2030. A geothermal heat pump (GHP), also known as a ground source heat pump, is a heating and cooling system that uses the natural heat storage ability of the earth and the transfer of heat between the earth and a building to provide heating, cooling, and, in some cases, hot water. The key factors driving the market growth are high adoption in the residential sector, contribution of heat pump technology in reducing CO2 emission, increase in demand for energy-efficient solutions, and the rise in construction activity that anticipated to support the market growth during forecast period 2023-2030.

Additionally, the growing construction sector can significantly support the growth of the geothermal heat pump market. As the construction sector expands, there is a parallel increase in the demand for heating, ventilation, and air conditioning (HVAC) systems. Geothermal heat pumps, being efficient and sustainable HVAC solutions, are well-positioned to meet this demand. According to Statista, in 2020, the global construction market was valued USD 6.4 trillion; in 2022 the market reached USD 8.2 trillion and it is anticipated to reach USD 11.8 trillion by 2027. As a result, the growing construction sector is anticipated to support the market growth. Moreover, increase in the integration of Internet of Things (IoT) and ongoing advancements in geothermal heat pump technology is anticipated to create the lucrative opportunity for the market during forecast year. However, the high initial costs stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Geothermal Heat Pump Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 with largest market share owing to the Increasing focus on renewable energy sources, supportive government policies and financial incentives, growing awareness of environmental issues, and presence of key market players. Whereas, Asia Pacific region is expected to grow with the highest CAGR during the forecast period, owing to factors such as the growing awareness and concerns about environmental issues, increasing costs of conventional energy sources, such as electricity and gas, and rapid urbanization and construction activities.
