Abstracts

Global Glass Syringe Market is anticipated to grow with a healthy growth rate of more than 13% over the forecast period 2020-2027. Glass syringes are the most widely used in syringe pump applications. They are available in a variety of sizes including microliter volumes, enabling experiments with extremely small injection volumes. They are ideal for high precision work. In the recent years, there has been a surge in health issues due to unhealthy lifestyle of people and growth of healthcare sector is likely to contribute to the expansion of the global glass syringe market. Also, the use of plastic material for manufacturing syringes causes harm to environment and plastic syringes do not have the capacity to hold the highly sensitive drugs. But glass syringes can hold the high precision drugs without causing any harm to the drug. Moreover, COVID-19 vaccine distribution has led to a huge demand for syringes, especially glass syringes to hold the sensitive drug. This will lead to the growth of glass syringes market. In 2021, , UNICEF anticipates delivering over 1 billion syringes to support COVID-19 vaccination efforts and 620 million syringes that UNICEF will purchase for other vaccination programs against other diseases such as measles, typhoid and more. This is likely to boost the demand for syringes market. However, the presence of plastic and disposable syringes in the market impedes the growth of the market over the forecast period of 2020-2027.

Also, due to the rising health issues and demand for non- reactive syringes which can hold highly sensitive drug is likely to drive the growth of the market. The regional analysis of global Glass Syringe market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading/significant region across the world in terms of market share owing to the growing health issues in US due to unhealthy lifestyle and increasing diseases. Whereas, Europe is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027. Factors such as rising cancer patients required considerable use of healthcare resources would create lucrative growth prospects for the Glass Syringe market.
