Global Glass Tempering System Market to reach USD 124.5 million by 2025.

Global Glass Tempering System Market valued approximately USD 86 million in 2016 is anticipated to grow with a healthy growth rate of more than 4.20% over the forecast period 2017-2025. Toughened glass or tempered glass acquires a degree of strength of normal glass sheet which when broke, shatters into small and comparatively harmless pieces. Toughened or tempered glass are most popular types of glasses as they are more resistant to vibrations, and shocks and thus are used in windows, cars and other such applications. A system used for tempering the glass is called glass tempering system in which glass is superheated and then cooled immediately, the glass expands when heated at a high temperature and contracts when cooled quickly. Tempered glass is commonly used in extreme pressure and temperature, thus when it breaks, it forms small pieces, unlike normal glass. Owing to this property, tempered glasses are used in many safety glass applications. Various companies research and develop advanced systems which facilitate the easy and efficient handling and processing of the glass in the system. Thus the global glass tempering System market is expected to gain traction in the forecast period 2017-2025 with significant CAGR.

the factors such as high operating cost, high initial investments, non-availability of transportation can affect the global market for the glass tempering systems. The increasing demand for the laminated glass due to its properties such as light weight and anti-breakage affect the global demand for the tempered glass ultimately affecting the

global glass tempering system market in the forecast period 2017-2025.
