Abstracts

Global Glyphosate Market is valued approximately USD 4.44 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 2.4% over the forecast period 2021-2027. Glyphosate is an artificial particle which is heavily used in the production of hybrid crops, such as, cotton, corn, soybean, sugar beets and many more. The increase in population leading to rise in food consumption and growing demand for Genetically Modified (GM) crops are factors contributing to the market growth. For instance: according to Statista, the global production of cotton is projected to increase to 218.6 million bales by the year end of 2021 from 122 million bales in the year 2020. However, effect of COVID-19 pandemic on glyphosate supply and increase in the resistance of weeds with the use of glyphosates may impede the growth of the market over the forecast period of 2021-2027. Also, technological advancements and increasing use of glyphosates in the fruits and vegetables market owing to its adaptability is likely to increase the growth of the market in the forecasting period.

The regional analysis of global Glyphosate market includes Asia Pacific, North America, Europe, Latin America and Rest of the World for analysis and estimation, Asia Pacific is a significant region in terms of largest market share across the world owing to high demand for GM (Genetically Modified) Crops. Whereas, North America is anticipated to exhibit the highest growth rate over the forecast period 2021-2027. Factors such as presence of well-established firms in the market would create lucrative growth prospects for the Glyphosate market across North America region.
