Global Green Building Market is valued approximately USD 20.35 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 1.5% over the forecast period 2022-2028. Green buildings, also known as sustainable construction, are structures that are ecologically responsible and energy efficient throughout their entire cycle. Green construction approaches strive to lessen a building's environmental effect. Most green construction materials, such as timber, recycled metal, fiberglass, and mineral wool, are renewable and non-toxic in nature. Green buildings generate renewable energy on-site using biomass, solar power, hydropower, and wind power. Because of rising environmental concerns and severe government requirements, the worldwide market for green buildings is likely to rise steadily. Green buildings are predicted to rise in popularity in the industrial sector due to their low operating and maintenance expenses. Rising demand for energy-efficient technology is predicted to drive market demand for green buildings. Growing demand for green buildings in the residential and commercial sectors is likely to drive market expansion over the forecast period. Green building certification programmes like LEED and the ICC 700 National Green Building Standard are projected to boost demand for green building projects in the future. The number of LEED-certified projects in the United States climbed from 296 in 2006 to over 67,200 in 2018. Market growth is being driven by the continued fast adoption of green technology and sustainability solutions. As an example, Advanced Green Technologies (AGT) finished South Florida's second-largest solar roof, which generates 90 to 100 percent of the power necessary for the entire building, at the Costex Tractor Parts (CTP) headquarters in Doral in April 2021. The CTP solar installation is one of 300 solar business roof installations completed by AGT to

commemorate the company's 14th anniversary. The 3,974 solar panels on the CTP roof create 1.6 MW of sustainable energy. However, high material costs are projected to be a significant impediment to the green construction sector.

The key regions considered for the Global Green Building Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World. Green construction is a large market in North America and Europe. This region's market is characterized by growing awareness of sustainable building and rising demand for low-energy consumption solutions. However, because to the expanding industrial sector and increasing urbanization in emerging nations such as India and China, Asia Pacific is likely to be the fastest-growing area. Furthermore, rising industrial pollution, along with stringent environmental restrictions in the area, is likely to boost market expansion in the industrial sector.
