## **Abstracts**

Global H1N1 (swine flu) Vaccination Market is valued approximately USD 1.89 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 5.20% over the forecast period 2022-2028.

The H1N1 virus is a term used for an infectious disease that exhibits symptoms such as red-watery eyes, high fever, body aches, persistent cough, and headache. The infection is known to have a negative impact on the prevailing chronic illnesses, like Chronic Obstructive Pulmonary Disease (COPD), pneumonia, and bronchitis, and can be deadly in several cases. H1N1 vaccines are introduced as a preventive measure that is administered by the means of intranasal and intradermal procedures to present active immunization against the virus. The rising number of government subsidies for vaccine manufacturing, growing prevalence of epidemic H1N1 infection, increasing public-private partnerships for the supply of H1N1 vaccines are the major factors that may surge the market demand around the world. Additionally, a rising number of research and development activities, as well as increasing levels of respiratory diseases and immune-deficient disorders are further stimulating the market growth globally. For instance, in February 2020, Abbott India announced the introduction of an inactive

vaccine in India against four strains of the influenza virus. Thereby, an increasing number of product launches propels the market demand. However, high costs & lengthy manufacturing processes impede the growth of the market over the forecast period of 2022-2028. Also, the shift from egg-based to cell-based manufacturing is anticipated to act as a catalyzing factor for the market demand during the forecast period.

The key regions considered for the global H1N1 (swine flu) Vaccination market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the growing expenditure of healthcare facilities, coupled with the increasing number of research and development activities.

Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as the rising number of infected populations, as well as growing awareness regarding the availability of the H1N1 vaccines, would create lucrative growth prospects for the H1N1 (swine flu) Vaccination market across the Asia-Pacific region.
