## Abstracts

Global Headlight Control Module Market is valued approximately at USD 3.8 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 4.3% over the forecast period 2021-2027. The headlight control module is an electrical component used to regulate light in vehicles. By offering an automated high beam, the module assists in regulating the operations of the headlights and horns. With the assistance of a video camera, it may be adjusted between low and high light beam depending on the other direction for measuring the distance between the front vehicles during traffic. One of the primary factors driving the growth of the headlight control module market is the increase in the sales of luxury and SUV cars among the global population. The market is expected to grow due to an increase in manufacturers' adoption of headlight control modules, which are extremely useful while driving a vehicle, particularly on the highway, where it tends to switch between low and high beam in response to oncoming traffic from the opposite direction, as well as rising concerns about road safety. For instance, as per Statista, between 2017 and 2023, sales of sport utility vehicles (SUVs) are predicted to double, exceeding 50 million units. Whereas the figure was only 26.5 in 2017. Off-road vehicles and road-use passenger automobiles are combined in sport utility vehicles. Additionally, changes in consumer preferences, increased disposable income, increasing car production and sales, urbanization, and increased use in the manufacturing of electric vehicles all boost the headlight control module market. However, rise in concern of repair and replacement of complete LED lighting bulb, may

impede market growth over the forecast period of 2021-2027.

Geographically, Asia Pacific region is expected to rise at the fastest rate in the worldwide headlight control module market due to strong consumer adoption and automotive sales. Because of their huge domestic car production and sales, China and Japan have the largest market shares. Furthermore, manufacturers in these nations place a strong emphasis on technology improvements, especially lighting, which drives demand for headlight control modules. The market would be pushed even higher by rising consumer per capita income and strong SUV sales in emerging economies such as India.
