## **Abstracts**

Global Health Self-Monitoring Technologies Market is valued approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. Self-monitoring is a recent development in personal health where people utilise software and electronic devices to gather, process, and present a variety of personal data to aid in managing and monitoring their own health. Recent technological advancements make self-tracking easier. The Health Self-Monitoring Technologies market is expanding because of factors such as rising prevalence of acute diseases such as diabetes and chronic disease and growing Geriatric Population.

Rising prevalence of acute diseases such as diabetes and chronic disease across the world is fostering the market growth, according to a 2021 report from the International Diabetes Federation, India had an estimated 74,194.7 thousand cases of diabetes in 2021, and by 2030, that number is predicted to rise to 92,973.7 thousand cases. Furthermore, according to Robert Wood Johnson Foundation, in year 2020, the incidences of chronic illness in United States stood at 157 million cases which is projected to increase and reach at 171 million cases by year 2030. In addition, high time requires for the physical tests and rising technological advancement is creating a lucrative growth to the market. However, high cost of health self-monitoring

technologies may hamper the market growth.

The key regions considered for the Global Health Self-Monitoring Technologies Market study includes Asia Pacific, North America, Europe, Latin America, and Rest of the World.
