Abstracts

Global Healthcare 3D Printing Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. 3D printing is also known as additive manufacturing, which is a technology for creating three-dimensional solid objects in the healthcare sector. 3D printed objects are produced through additive methods in which an object is produced by adding layers of material one after another until the product is made. The successive layers are placed over one another to make a 3D-printed object. The use of 3D printing has advanced from prototyping in a variety of applications to the creation of functional components and goods. Factors such as the rising focus on the advancement of healthcare facilities, the increasing geriatric population, and surging demand for personalization and customization of medical products are attributing to the growth of the market.

The rising incidences of various disorders such as cardiovascular, orthopedic, and others are propelling the demand for 3D printing. 3D printing plays a vital role in enhancing data visualization during diagnosis, treatment planning, and surgical procedures for cardiology. According to the World Health Organization (WHO) report 2021, it was estimated that over 17.9 million fatalities in 2019 were caused by cardiovascular diseases, accounting for nearly 32% of all deaths worldwide.

Additionally, according to the National Library of Medicine, India has the highest global burden of cardiovascular disease (CVD). It is projected that approximately 4.77 million CVD-related fatalities in India during 2020, which is an increase from 2.26 million in 1990. Hence, the increasing incidences of cardiovascular illness are accelerating the growth of the market. Moreover, the rising technological developments, as well as the heavy investments in R&D activities are presenting various lucrative opportunities over the forecasting years. However, the high cost associated with 3D printing and the lack of skilled labor is hampering the market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Healthcare 3D Printing Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America dominated the market in terms of revenue, owing to the growing investments for R&D facilities, development of 3D printing-based products, and rising awareness among patients. Whereas, the Asia Pacific is also expected to grow with the highest CAGR during the forecast period, owing to factors such as the rising focus on the advancement of healthcare infrastructure, and increasing demand for customized medical equipment in the market space.
