Abstracts

Global Healthcare Application Programming Interfaces (API) Market is valued at approximately USD 211 million in 2019 and is anticipated to grow with a healthy growth rate of more than 6.3% over the forecast period 2020-2027. An application programming interfaces (API) is a set of standards that govern the interaction between multiple software intermediaries. In the era of digitalization in healthcare sector, API have emerged as the most useful solution for managing the flow of healthcare data in a healthcare organization's internal applications, such as EHR and several other data exchange tools. The use of API is significantly growing in a healthcare industry as developers seek simple, effective standard-based solutions for their interoperability complications, resulting in a high demand for healthcare API solution across the globe. Moreover, the rise in adoption of API-based electronic health record (EHR), growing standardization and product launches to easily access the patient data, and escalating demand for healthcare integration are the few other factors responsible for the CAGR of the market during the forecast period. For instance, in April 2020, Google unveiled a new cloud healthcare API that enables the exchange of data among healthcare applications and solutions developed on google cloud. In June 2018, Apple also introduced healthcare API from where developers can retrieve the EHR data of patients from over 500 hospitals operated in the United States. Therefore, such initiatives are likely to expand the adoption of healthcare application programming interfaces (API)

systems, thereby accelerating the market growth throughout the world. However, data security & privacy concern is one of the prime factors inhibiting the market growth over the forecast period of 2020-2027.

The regional analysis of the global Healthcare Application Programming Interfaces (API) market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading/significant region across the world in terms of market share owing to the early adoption of advanced application programming interfaces systems in healthcare sector, along with the presence of a significant number of market vendors in the region. Whereas Europe is anticipated to exhibit the highest growth rate / CAGR over the forecast period 2020-2027. Factors such as the advent of the Internet of Things (IoT) and related technologies, coupled with the existence of well-established healthcare infrastructure would create lucrative growth prospects for the Healthcare Application Programming Interfaces (API) market across the Asia-Pacific region.
