Global Healthcare Information System Market is valued at approximately USD 359.8 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 13.2 % over the forecast period 2022-2028. The Health Information System (HIS) is a computer-based system that makes it easy to share protected health information (PHI) between organisations and providers. As a result, healthcare providers can provide patients with more consistent and coordinated treatment. HIS is particularly beneficial to patients who require cross-specialty care coordination and comprehensive medical information management. Above all, it improves both the quality of care and the outcomes for patients. The demand for high-quality healthcare systems is growing and supportive government initiatives to promote Healthcare Information Systems have led to the adoption of Healthcare Information Systems across the forecast period. For Instance: as per Statista 2021, in 2020, the worldwide digital health market was estimated to be worth more than \$200 billion. This sum is likely to approach 500 billion dollars by 2024, according to recent projections. Mobile and wireless health are expected to be among the most important drivers of this expansion. Digital health is also a hotbed for new venture capital, particularly in the form of companies. Invested funding grew quickly, from 1.1 billion dollars in 2010 to approximately 22 billion dollars in 2020. Also, the

growing consciousness and technological advancements in Healthcare Information Systems are likely to increase the market growth during the forecast period. However, implementation of IT in the healthcare system has been unusually delayed which may impede the growth of the market over the forecast period of 2022-2028.

The key regions considered for the Global Healthcare Information System market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world in terms of market share owing to the growing demand for high-quality healthcare systems and supportive government initiatives to promote Healthcare Information Systems. Whereas, Asia-Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2022-2028. Factors such as growing consciousness and technological advancements in Healthcare Information Systems would create lucrative growth prospects for the Healthcare Information System market across Asia-Pacific region.
