Global Healthcare Technology Management Market is valued approximately USD 326 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 20% over the forecast period 2022-2028.Healthcare technology management (HTM) is the systematic process of preparing and managing healthcare technology assets in order to provide the best possible care at the lowest cost.The need for improved asset management in hospitals, as well as a growing emphasis on preventative medical equipment maintenance, are driving growth in this market. The benefits provided by ISOs, as well as the growing requirement for data security, contribute to the expansion of this industry. The increasing demand on healthcare providers across the United States to better manage current medical equipment, personnel, and beds has driven them to implement efficient healthcare technology management. Most healthcare organisations devote a significant percentage of their cash and attention to the search for hospital equipment. Whereas key players are also making strategic moves to enhance their market share. For instance, Crothall Healthcare (US) introduced teamCHAMPS, a cloud-based computerised maintenance management system (CMMS) powered by Nuvolo, in 2021. This platform is based on the ServiceNow platform, allowing customers to benefit from increased uptime, improved clinical

engineering programme management, and improved medical device safety and performance. Information on service contract management, service requests, and preventative maintenance management is also captured by the platform. .However, a scarcity of trained technicians and clinical/biomedical engineers is projected to limit the market's growth throughout the projection period.
