Abstracts

Global Heart Attack Diagnostics Market is valued approximately at USD XX billion in 2022 and is anticipated to grow with a growth rate of more than 7.9% over the forecast period 2023-2030. The prevalence of chronic illnesses such as diabetes and hypertension is growing. Numerous risk factors, including as a high body mass index, a change to an unhealthy lifestyle, and cigarette use, will promote atherosclerosis and constrict the coronary arteries as a result of fat deposition and high cholesterol levels. The market growth is driven by key factors such as increase in cases of coronary heart disease, rising obesity and tobacco smoking and increase in healthcare expenditure.

According to a World Health Organization report, cardiovascular disorders including heart attacks and strokes contribute to four out of every five fatalities globally and are the leading cause of mortality. Furthermore, heart attacks and strokes account for 85% of the roughly 13 million fatalities that take place each year in low- and middle-income nations. According to an American Heart Association estimate, 45% of Americans might have some form of heart illness (mostly a heart attack) by 2035, which could be a significant market driver for heart attack diagnostics. Also, according to the findings of a comprehensive survey conducted nationwide in India, approximately 14 percent of male respondents experienced cholesterol issues in 2020. Among female respondents, nearly ten percent reported cholesterol problems, whereas only three percent reported heart problems. Furthermore, higher cost of diagnostic products and increasing R & D,

launches of novel developed devices create lucrative opportunities in the forecast years. However, low Medicare reimbursement and higher cost of diagnostic products stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Heart Attack Diagnostics Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America is leading the global market share owing to increase in obesity rate in United States and rising number of heart patients in the region. However, Asia Pacific is expected to be the fastest growing region due to increase in healthcare expenditure and technological advancements in diagnosis.

Major market player included in this report are:
