Abstracts

Global Heart-lung Machine Market is valued at approximately USD 2.18 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 6.9% over the forecast period 2023-2030. The heart-lung machine market pertains to the industry involved in the production and distribution of medical devices known as heart-lung machines, which are designed to temporarily take over the function of the heart and lungs during open-heart surgeries, facilitating the circulation of oxygenated blood throughout the body while the patient's heart is temporarily stopped. The Heart-lung Machine Market is being driven by factors such as the increasing number of cardiovascular surgeries and the increasing number of organ transplants.

The heart-lung machine allows surgeons to perform complex cardiac surgeries by maintaining vital organ perfusion and ensuring the patient's oxygenation and circulation are adequately supported during the procedure. According to the National Heart, Lung, and Blood Institute (NIH), more than 2 million people worldwide have open heart surgery each year to treat a range of heart-related conditions. Along with this, Preliminary data from the United Network for Organ Sharing (UNOS), the National Organ Procurement and Transplantation Network in the United States, indicates that in

2022, number of organ transplants were performed. The total number of organ transplants reached 42,887, representing a notable increase of 3.7 percent compared to the previous year 2021. Thus, the increasing number of organ transplants and increasing cardiovascular surgeries fuel the growth of the market. In addition to technology advancement in the heart-lung machine and the increasing aging population are creating lucrative opportunities for the market. However, the complications associated with the use of heart-lung machines may hinder the market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Heart-lung Machine Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America dominated the market in 2022 owing to the increasing prevalence of heart disease, well-developed healthcare infrastructure and aging population in the region. Asia Pacific is considered the fastest growing region during the forecasted period due to growing healthcare infrastructure and large population base.
