Global Hemodialysis and Peritoneal Dialysis Market is valued at approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2028. Hemodialysis dialysis is used for pumping blood out of the body into an artificial kidney machine and returned to the body by tubes that are used to connect the machine. Additionally, in peritoneal dialysis, the inner lining of the human belly acts as a natural filter. These dialysis procedures are majorly opted by the people who are suffering from chronic renal failure. The rise in the number of end-stage renal disease (ESRD) patients, several risks associated with transplants, shortage of organ donors, are the primary factors that are contributing to the market growth across the globe. For instance, according to Statista, in the United States, the rate of prevalent cases of end-stage renal disease (ESRD) is recorded at the 2,195.08 per million population in 2014 and the number constantly rises and reached 2302.44 per million population in 2019. Accordingly, the growing cases of end-stage renal disease (ESRD) are surging the demand for hemodialysis and peritoneal dialysis, which is bolstering the market growth in the near future. However, a lack of awareness and risks and complications of dialysis and reimbursement concerns impede the growth of the market over the forecast period of 2022-2028. Also, increasing technological

advancements and rising investment in infrastructural development activities are anticipated to act as catalyzing factors for the market demand during the forecast period.

The key regions considered for the global Hemodialysis and Peritoneal Dialysis Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the rising prevalence of hypertension and diabetes cases, along with the increasing development of innovative medical devices. Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as the increasing incidences of acute kidney injury (AKI), as well as government initiatives for the adoption of peritoneal and home dialysis, would create lucrative growth prospects for the Hemodialysis and Peritoneal Dialysis Market across the Asia-Pacific region.
