Abstracts

Global Hepatitis E Diagnostic Tests Market is valued approximately USD 50.00 million in 2019 and is anticipated to grow with a healthy growth rate of more than 4.50 % over the forecast period 2020-2027. Hepatitis E virus is the leading cause of acute viral hepatitis in the world mainly affecting the liver. Hepatitis E virus is considered as travel-associated infection. Diagnosis of HEV is based on the detection of viral RNA in the serums or feces. There is no specific treatment for hepatitis E. Analysis of HEV performed on RNA in biologic specimens such as liver biopsy, stools and serums are used for diagnostics. Further, government and health authority of various countries are also taking various efforts for making diagnostic tests available in the countries. A world Health Organization is focusing in making vaccine and diagnostic test available to reduce the global burden of disease. Also, the key players are focusing on strategies such as product launch, innovation and merger & acquisition to sustain themselves amidst fierce competition. The growth of the market is attributed owing to the increase in rise in prevalence of hepatitis-e disease along with the government initiative regarding awareness of hepatitis E diagnosis. As per the World Health Organizations in July 2020, the WHO estimated that every year there were an estimated 20 million HEV infections worldwide, leading to a 3.3 million symptomatic cases of hepatitis E. As a result, the need for hepatitis e diagnostic tests would increase thereby, reinforcing the growth of the market during the forecast period of 2020-2027. However, high cost of diagnostics procedure and poor reimbursement policies may hinder growth of global Hepatitis E diagnostic tests market.

The regional analysis of global Hepatitis E Diagnostic Tests market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. Asia-pacific is the leading/significant region due to the increasing incidence of Hepatitis E in some countries such as Nepal, Vietnam, Pakistan, Bangladesh, Burma, Kazakhstan, Thailand, and Bhutan of this region. Also, the dominance of the region is witnessed owing to the lack of proper sanitation and access to safe drinking water which may cause Hepatitis E. Whereas Asia-Pacific is also anticipated to exhibit highest growth rate / CAGR over the forecast period 2020-2027.
