## **Abstracts**

Global Herpes Zoster Infection Treatment Market is expected to grow by USD XX Million in 2020 and is accelerated to grow at CAGR of almost 4.1% over the forecast period 2021-2027.

Herpes Zoster, also known as shingles, is a viral infection that causes painful rashes on skin. Herpes Zoster is caused by the Varicella zoster virus, it is the same that causes Chicken pox as well. After the person has had chicken pox, the virus lies dormant in certain nerves for years and its reactivation causes Herpes Zoster Infection. Although, the infection is incurable, vaccines are available to prevent shingles and long-lasting nerve pain that sometimes develops. Herpes Zoster can affect anybody with weak immune system; it is more likely to be found in people aged over 50 years, HIV and cancer patients. The rising prevalence rate of shingles in older population and predominance of effective antibodies are the prime reasons driving the growth of herpes zoster treatment market. The herpes infection rate and increasing elderly population are fueling the overall demand of the market. For instance, according to the National Foundation for Infectious Diseases, about 98% of the US adults have had chicken pox and are at risk of shingles. Almost 1 out of 3 people in the US will develop shingles during their lifetime.

Furthermore, there is substantial increase in research and development activities. The market is growing due to the availability of effective vaccines and drugs to keep the patient healthier and provide treatment without hospitalization. On the flip side, costly

antibodies are restraining vaccination drive in developing economies. Inadequate scope of the prevention, improper reimbursement policies and lack of healthcare guidance etc. are hampering the growth of the market. North America accounts for majority of the shares in Herpes Zoster Infection Treatment Market among all regional markets, due to increase in the government support for various vaccination and awareness programs and funds provided by them. Apart from this, Asia Pacific, Middle East and Africa will emerge as fastest growing countries due to increasing prevalence of the herpes zoster disease.
