Abstracts

Global High Temperature Elastomers Market is valued at approximately USD XX billion in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2029. Elastomers are referred to as polymers that include viscosity and elasticity coupled with weak intermolecular forces. The elastic property of elastomers helps in retaining their original shape while their deforming forces get removed. The growing awareness regarding the superior properties of high-temperature elastomers, coupled with the increasing application in the manufacturing of specialty rubber are the key factors that are stipulating the market demand across the globe.

The rising demand from the automotive industry and the superior property of high temperature elastomers are the factors driving the growth of the market over the forecast years. As per Statista analysis, the automotive manufacturing industry recorded USD 2.5 trillion in 2020, and the amount increases and reached USD 2.8 trillion in 2022. Hence, the development of the automotive industry and the high application of high temperature elastomers in automotive is fueling market growth around the world. Whereas, the high cost of production is the factor restraining the growth of the market during the estimated years. However, the development of new grades of HTES and rising demand in developing nations are lucrative opportunities for the growth of the market over the forecasting period.

The key regions considered for the Global High Temperature Elastomers Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. Asia Pacific accounts for the largest share in the global high temperature elastomers market owing to the rising demand from the automobile industry, as well as high presence of various other end-use industries. Also, Europe is witnessed as a fastest region in the global high temperature elastomers market due to large investments across industries such as construction and building, health care and consumer goods, and rising per capita income of the population in emerging economies across the regional market.
