Global Hipot Tester Market is valued at approximately USD 81 million in 2021 and is anticipated to grow with a healthy growth rate of more than 4.73 % over the forecast period 2022-2028.

High potential (High voltage) tester is abbreviated as Hipot tester. Hipot testers are e-devices that are used to check the insulation of electric current in equipment including transformers, motors, circuit boards, and cable or wire assemblies. Hipot testers are devices that are used to test the electrical safety of a building. It prevents current from flowing from one location to another. Corrosive pollutants near conductors, cable tolerance mistakes, terminal spacing difficulties, and crushed insulations are all detected by the Hipot tester. The hipot tester is a non-destructive instrument for determining electrical insulation. Dielectric withstand test, dielectric breakdown test, and insulation resistance test are the three most typical tests performed by Hipot testers. For the safety of humans and the environment, the usage of a Hipot tester is necessary for electrical equipment and circuit boards. Rising demand for safety in the electronic component by the end-users, rising demand for the technologically advanced product, rising concern on personal and industrial safety issues, and major players introducing advanced products in the series have driven the adoption of Hipot Tester across the projected period. For Instance: Chroma has launched 19020-Multichannel Hipot Tester with a brand new design that can detect hipot leakage of multiple current channels at

the same time. This multichannel has increased the efficiency of electrical safety testing and also reduced testing risks for products. Also, expanding higher transmission voltage systems and rising investments to develop modern power transmission infrastructure are most likely to boost the overall growth of the Hipot Tester market. However, several manufacturers lacking Knowledge about the importance of safety and lacking accuracy for the detection of minor leakages can obstruct the market's expansion over the projection period of 2022-2028.

The key regions considered for the global Hipot Tester market study include Asia Pacific, North America, Europe, Latin America and Rest of the World. Europe is the leading region across the world. Rising technological advancement is driving the market growth in Europe. Whereas, Asia Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2022-2028. The market is expected to grow during the projected period, due to rising concerns about safety issues.
