Abstracts

Global Hybrid Devices Market is valued at approximately USD 41.57 billion in 2022 and is anticipated to grow with a healthy growth rate of more than 17.6% over the forecast period 2023-2030. A hybrid device refers to a computer or device that can function both as a standalone tablet and a laptop. It features a flexible and innovative design that combines the convenience of a tablet with the operating system and capabilities of a laptop, including a keyboard. The Hybrid Devices market is expanding because of factors such as an increase in the number of internet users and increasing demand for mobile computing devices. Moreover, as the number of internet users increases, there is a higher demand for devices that can provide a seamless online experience and access to various digital services. This drives the adoption of Hybrid Devices. Its importance has progressively increased during the forecast period of 2023-2030.

According to Statista in April 2023, the global number of internet users reached 5.18 billion, accounting for approximately 64.6 percent of the world's population. Among these users, 4.8 billion individuals, or 59.9 percent of the global population, were actively engaged in social media platforms. In 2022, the age group of 15 to 24 years exhibited the highest internet usage across all regions, with young people in Europe demonstrating the highest penetration rate at 98 percent. The rising consumer demand for mobile devices have a significant influence on the Hybrid Devices market. As individuals rely more on their mobile devices for a wide range of tasks and activities,

there is a growing requirement for devices that can offer the flexibility and functionality of both tablets and laptops. According to Statista in 2021, the global count of operational mobile devices surpassed 15 billion, showing an increase from over 14 billion in the previous year. Projections indicate that the number of mobile devices will further rise to 18.22 billion by 2025, representing a significant growth of 4.2 billion devices compared to the levels observed in 2020. In addition, growing adoption of wireless display technology and rising technological advancement in Hybrid Devices would create lucrative growth opportunities. However, the high cost of hybrid devices and technical complexity stifles market growth throughout the forecast period of 2023-2030.

The key regions considered for the Global Hybrid Devices Market study includes Asia Pacific, North America, Europe, Latin America, and Middle East & Africa. North America is dominating the market during the forecast period owing to, advanced technological advancements and well-established infrastructure. Additionally, the region's higher purchasing power has contributed to the market's growth, as it enables consumers to afford hybrid device solutions. Asia-Pacific is the fastest-growing region during the forecast period owing to the factors such as strong consumer demand for enhanced productivity and advanced multimedia capabilities in their devices. The growing number of internet users in the region is among the key factors propelling the growth of the hybrid devices industry.
