Abstracts

Global Hybrid SeedMarket is valued approximately USD 47.87 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 9% over the forecast period 2021-2027. Hybrid Seed is a process of method of pollination in which the pollen of two different species is crossed by human intervention, created by crossing two different varieties of the same plant. It can occur naturally through random crosses, but commercially available hybridized seed, often labeled as F1, is deliberately created to breed a desired trait. The increasing investments in commercial farming, modernization of agriculture, and increasing population has led the adoption of Hybrid Seed across the forecast period. Increasing population is leading to rise in food demand propelling the market forward. For instance, as per the Statistic 2018, the value of hybrid seed was estimated at 5.61 billion U.S. dollars and it is expected to rise to 8.86 billion U.S. dollars by 2023 However, preparation of hybrid seed is expensive and complex which impedes the growth of the market over the forecast period of 2021-2027. Also, technological advancements are likely to create new opportunities for the market.

The Global Hybrid Seedmarket is considered for the key regions such as Asia Pacific, North America, Europe, Latin America and Rest of the World. Europe is a significant region across the world in terms of market share owing to technological advancement as well as rising organic products consumption. Whereas, Asia-Pacific is also anticipated to exhibit the highest CAGR over the forecast period 2021-2027. Factors such as rising disposable income, rising population would create lucrative growth prospects for the Hybrid Seedmarket across Asia-Pacific region.
