Abstracts

Global Hydrogen Generation Market is valued at approximately USD 130 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 9.2 % over the forecast period 2021-2027. Hydrogen generation is a technique which is used to produce hydrogen from water, using a process called electrolysis. Growing investment in renewable energy, government regulations for desulfurization and greenhouse gas emissions have led to the adoption of Hydrogen generation across the forecast period. For Instance: as per the Ministry of New & Renewable Energy (MNRE), in partnership with FICCI India set to achieve 450 GW renewable energy installed capacity by 2030. Also, with the increasing focus on developing a hydrogen-based economy, the adoption & demand for Hydrogen generation is likely to increase the market growth during the forecast period. However, the high capital cost of hydrogen energy storage impedes the growth of the market over the forecast period of 2021-2027.

Global Hydrogen Generation Market is segmented on the basis of geographical region as Asia Pacific, North America, Europe, Latin America and Rest of the World. North America is the leading region across the world in terms of market share owing to the technological advancement and heavy investment in fuel cell adoption. Whereas, Asia-

Pacific is also anticipated to exhibit the highest growth rate over the forecast period 2021-2027. Factors such as adopting green technologies would create profitable growth prospects for the Hydrogen generation Market across Asia-Pacific region.
