## **Abstracts**

Global Hydroxychloroquine Sulfate Tablets Market is valued approximately at USD XX million in 2019 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2020-2026. Hydroxychloroquine (HCQ) is a therapeutic agent used mainly to avoid and cure malaria types such as chloroquine-sensitive malaria. Growing malaria prevalence & increasing demand for efficient and safe medicines are expected to fuel demand. Because of its powerful existence against large strains of parasites, hydroxychloroquine sulfate tablets are commonly used for treating malaria. Malaria prevalence in Africa in 2018 reached 210,000 cases which are expected to fuel demand for tablets of hydroxychloroquine sulfate. In addition, it is likely that its easy availability, economic nature and ability to reduce platelet loss will spur market growth in hydroxychloroquine sulfate. Industry participants are experimenting increasingly with varying dosages and developing novel tailored approaches to reduce the effects of chronic skin diseases. Rising policy and private funding for selling the medication is also expected to have a significant commercial impact. In addition, it does not aggravate the production of acne and oil rendering it a healthy option for severe and chronic skin diseases that will accelerate the sulfate demand for hydroxychloroquine. According to the US Center for Disease Control and Prevention, the drugs showed in-vitro-i.e., in laboratory studies outside human species-action against SARS-CoV-2 (called Covid-19) and other coronaviruses, with comparatively higher efficacy of hydroxychloroquine. The regional analysis of Hydroxychloroquine Sulfate Tablets market is considered for
