## **Abstracts**

Global Hyper Automation Market is valued approximately USD 175 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 9 % over the forecast period 2021-2027. Hyper automation refers to automation of every process in an organization that can be automated. Organizations adopt hyper automation in order to streamline processes across their business with the help of artificial intelligence (AI), robotic process automation (RPA), and other technologies to run without human intervention. The market is mainly driven by growing artificial intelligence market and rising digitization. According to PwC's Global Artificial Intelligence Study: Exploiting the AI Revolution -AI could contribute up to USD 15.7 trillion to the global economy in 2030, more than the current output of China and India combined. Among this, USD 6.6 trillion is likely to come from increased productivity and USD 9.1 trillion is likely to come from consumption-side effects Also, growing application of artificial intelligence in end use industries is likely to increase the market growth during the forecast period. However, unavailability of skilled professionals and high initial cost impedes the growth of the market over the forecast period of 2021-2027.

The key regions considered for the global Hyper Automation Market study includes Asia Pacific, North America, Europe, Latin America and Rest of the World.
