Global Hyperconnectivity Market is valued at approximately USD 310.9 billion in 2021 and is anticipated to grow with a healthy growth rate of more than 22.08% over the forecast period 2022-2029. Hyperconnectivity can be defined as the use of various systems and devices to remain connected to social networks and other digital sources of information. Hyperconnectivity is an interaction between information systems, data, and devices, which are connected to each other through the internet. The increasing adoption of IoT technologies and growing penetration of smartphones as well as strategic initiatives from leading market players are key factors accelerating the market growth.

The increasing adoption of Internet of Things (IoT) based devices is contributing to the growth of the Global Hyperconnectivity Market. For instance, according to Statista – in 2020, the total Internet of Things (IoT) market worldwide was estimated at USD 389

billion, and the market is projected to grow to more than USD 1000 billion by 2030. Moreover, as per Statista estimates – in 2020, globally the number of Internet of Things (IoT) devices was estimated at 9.7 billion, and as per projections, this number would grow to 29 billion by 2030. Also, rising emergence of high-speed internet connectivity in developing nations coupled with increasing adoption of hyperconnectivity solutions in organizations would create a lucrative growth prospectus for the market over the forecast period. However, increasing incidences of data breaches & concerns relating to data privacy impede the market growth throughout the forecast period of 2022-2029.

The key regions considered for the Global Hyperconnectivity Market study include Asia Pacific, North America, Europe, Latin America, and Rest of the World. North America dominated the market in terms of revenue, owing to the presence of leading market players and availability of required technological infrastructure in the region. Whereas Asia Pacific is expected to grow with the highest CAGR during the forecast period, owing to factors such as rising penetration of IoT-connected devices, coupled with growing industrialization and increasing investment in 5G technologies in the region.
