Abstracts

Global Hyperlipidemia Market is valued at approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX% over the forecast period 2022-2028. Hyperlipidemia is also known as high cholesterol or dyslipidemia. It is a condition where there are high levels of fat particles (lipids) present in the blood. The rising prevalence of hyperlipidemia, increasing investment in healthcare infrastructure, and growing number of geriatric populations are the primary factors fostering the market demand across the globe. For instance, as per the World Health Organization (WHO), the global population aged 60 years and above is expected to rise from 605 million in 2000 to 2 billion by the year 2050. Consequentially, the increasing aged population is more prone to get affected by a variety of diseases, which is surging the market demand across the globe. However, the high cost associated with the treatment and shortage of skilled professionals impede the growth of the market over the forecast period of 2022-2028. Also, an increase in the number of research and development activities and rising drug approvals and launches are anticipated to act as catalyzing factors for the market demand during the forecast period.

The key regions considered for the global Hyperlipidemia Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the

increasing incidences of hyperlipidemia, along with rising technological developments. Whereas, Asia-Pacific is anticipated to exhibit the highest CAGR over the forecast period 2022-2028. Factors such as the growing expenditure on healthcare facilities, as well as the increasing geriatric population, would create lucrative growth prospects for the Hyperlipidemia Market across the Asia-Pacific region.
