Abstracts

Global Hysteroscopy Procedure Market is valued approximately USD 3.83 billion in 2020 and is anticipated to grow with a healthy growth rate of more than 6.7% over the forecast period 2021-2027.

Hysteroscopy is the uterine cavity inspection by endoscopy with access through the cervix. It allows for the diagnosis of intrauterine pathology and serves as a method for surgical intervention.

Increasing prevalence of uterine fibroids and gynaecological disorders and rising adoption of minimally invasive surgeries is driving the growth of market.

. Meditrina Inc. founded in 2016, has launched Aveta™ System in 2019. The company received US\$ 13 Mn equity financing led by ShangBay Capital LLC and Aethan Capital, Inc, after the FDA approval for Aveta. This reflects the growth potential the hysteroscopy systems market holds during the forecast period.

Major availability of other diagnostic methods and treatment methods such as complete blood count, ultrasound, and drug therapies is hampering the growth of the market.

However, rising incidence of uterine cancer and increase in patient preference for non-invasive or minimally invasive treatment as well as higher adoption of these procedure because of minor incisions reduces postoperative pain and enable speedy recovery result in the growth of the market.

The regional analysis of Global Hysteroscopy Procedure Market is considered for the key regions such Asia Pacific, North America, Europe, Latin America and Rest of the World. North America along with Europe has most dominating market across the world and together accounted for nearly half of the market share in the hysteroscopy systems market.
