## **Abstracts**

Global Ibuprofen API Market is valued approximately at USD XX billion in 2020 and is anticipated to grow with a healthy growth rate of more than 4.8% over the forecast period 2021-2027. Ibuprofen is a drug that belongs to the anti-inflammatory drug class. It aids in the reduction of hormones that produce pain and inflammation in the body. Ibuprofen is used to treat fever, toothaches, back pain, headaches, and menstruation discomfort, among other problems. The medication is a propionic acid derivative that is non-steroidal. Ibuprofen market expansion is supported by an ageing population that is more susceptible to illnesses and health conditions. The market is driven by growing prevalence of chronic disorders and upsurge in pharmaceutical and biopharmaceutical production. The number of cases of rheumatoid arthritis in India has grown from 183,272 in 2007 to 263,365 in 2017, according to the Institute for Health Metrics and Evaluation. As a result, depending on the number of cases in other major Asian nations, healthcare activities related to the treatment of rheumatoid arthritis will need widespread and constant support. However, rising production costs may impede market growth over the forecast period of 2021-2027.

Asia-Pacific market is expected to develop rapidly over the projected period due to rising health spending. Furthermore, the low cost of manufacturing in China and India has led to an increase in production facilities, attracting pharmaceutical and biotechnology companies from all over the world to the Asia-Pacific region.
