## **Abstracts**

Global Immersion Cooling Market is valued at approximately USD 196.6 Million in 2020 and is anticipated to grow with a healthy growth rate of more than 23.6% over the forecast period 2021-2027. Immersion cooling is an IT cooling practice that enables submerging IT components and other electronics, including complete servers and storage devices, in a thermally conductive dielectric liquid or coolant. This removes heat from the system by liquid circulation into direct contact with hot components, then through cool heat exchangers. Fluids suitable for immersion cooling provide very good insulating properties to safeguard that they can safely come into contact with energized electronic components. Growing density of servers is expected to fuel Immersion Cooling market. For instance, the increasing demand for cognitive capabilities in the United States has led IBM Corporation to build four new cloud data centers in the country. This is likely to encourage the utilization of immersion cooling technology in these data centers, thereby propelling the market growth over the forecast period. Moreover, several key players are taking strategic initiatives to expand their presence in the market for instance,

- In June 2021, Submer partnered with ASA computers, the agreement . Forged out of a need to provide an alternative solution for the data center industry in decreasing

energy usage and costs, increasing compute density, capacity ( power, cooling, space), reducing operating and capital expenses and more.

- In June 2021, Schneider electric and Iceotope Technologies limited inn partnership launched A liquid cooled, EcoStruxure Modular Data Center, all in one Module. Integrated by avnet and containing chassis level precision immersion cooling Icotope, the new prefabricated module will allow the most CPU and GPU intensive high performance computing (HPU) edge application to be deployed with greater reliability in harsh and remote environments.

However, slow recognition from end user may impede market growth over the forecast period of 2021-2027.

The regional analysis of the global Immersion Cooling Market is considered for the key regions such as Asia Pacific, North America, Europe, Latin America, and Rest of the World (ROW). North America leads i. Immersion cooling market during the forecast period, due to the presence of a large number of data centers in the region, along with the rise in popularity of this technology, especially in the United States . the demand and rate of adoption for cloud based computing are rapidly increasing by technology giants, such as Facebook and Apple, owing to which, the number of data centers is increasing in the country, thereby, propelling the utilization of immersion cooling systems.
